AMENDMENTS TO THE CLAIMS:

This listing of claims replaces all prior versions and listings of claims in the

application.

LISTING OF CLAIMS:

1. (Currently Amended) A method of providing access to a software application

comprised of an application core and version-specific functionality, the method comprising:

enabling access to the application core;

determining a version of the software application; and

providing a module link that corresponds to the version, the module link for enabling the

application core to access to the version-specific functionality:

wherein the application core comprises software that is common across multiple versions

of the application, the version comprising one of the multiple versions, and the version-specific

functionality comprises functionality that is specific to the version of the software application.

2. (Cancelled)

3. (Original) The method of claim 1, further comprising:

encrypting the module link before providing the module link.

4. (Original) The method of claim 3, wherein the module link is encrypted with a public

key that corresponds to a user of the software application.

Applicant: Michael Altenhofen Attorney's Docket No.: 13909-055001 Serial No.: 10/698.108 Client Docket No.: 2003P00799 US

Serial No.: 10/698,108 Filed: October 31, 2003

5. (Original) The method of claim 4, further comprising:

receiving the public key used for encrypting the module link.

6. (Original) The method of claim 1, wherein the module link enables access to the

version-specific functionality by referencing the version specific functionality.

7. (Original) The method of claim 1, wherein the module link enables access to the

version-specific functionality by downloading the version-specific functionality and

incorporating the version-specific module into the application core.

8. (Original) The method of claim 1, wherein the module link comprises configuration

settings for the application core.

9. (Original) The method of claim 1, further comprising:

receiving identification information that corresponds to a user of the software application;

wherein the version of the software application is determined using the identification

information.

10. (Original) The method of claim 1, wherein the software application comprises a

content player in an electronic learning system and the version-specific functionality corresponds

to at least one of an online content player, an authoring environment content player, and an

offline content player.

11. (Currently Amended) A computer program product for providing access to a

software application comprised of an application core and version-specific functionality, the

computer program product being tangibly embodied in one or more machine-readable media an

information earrier, the computer program product being operable to cause a machine to:

enable access to the application core;

determine a version of the software application; and

provide a module link that corresponds to the version, the module link for enabling the

application core to access to the version-specific functionality;

wherein the application core comprises software that is common across multiple versions

of the application, the version comprising one of the multiple versions, and the version-specific

functionality comprises functionality that is specific to the version of the software application.

12. (Cancelled)

13. (Original) The computer program product of claim 11, wherein the computer

program product is operable to cause the machine to:

encrypt the module link before providing the module link.

14. (Original) The computer program product of claim 13, wherein the module link is

encrypted with a public key that corresponds to a user of the software application.

15. (Original) The computer program product of claim 14, wherein the computer

program product is operable to cause the machine to:

receive the public key used for encrypting the module link.

16. (Original) The computer program product of claim 11, wherein the module link

enables access to the version-specific functionality by referencing the version specific

functionality.

17. (Original) The computer program product of claim 11, wherein the module link

enables access to the version-specific functionality by downloading the version-specific

functionality and incorporating the version-specific module into the application core.

18. (Original) The computer program product of claim 11, wherein the module link

comprises configuration settings for the application core.

19. (Original) The computer program product of claim 11, wherein the computer

program product is operable to cause the machine to receive identification information that

corresponds to a user of the software application; and

wherein the version of the software application is determined using the identification information

20. (Original) The computer program product of claim 11, wherein the software application comprises a content player in an electronic learning system and the version-specific functionality corresponds to at least one of an online content player, an authoring environment

21. (Currently Amended) An electronic learning system, comprising:

a first system to provide course content;

content player, and an offline content player,

a second system to provide a content player that presents the course content; and

a third system to identify a version of the content player that is to present the course content, and to provide a module link for use with the content player, the module link for accessing functionality associated with corresponding to the version of the content player that is

to present the course content;

wherein the content player comprises software that is common across multiple versions of the content player, the version comprises one of the multiple versions, and the module link is for accessing functionality that is specific to the version of the content player that is to present the course content.

22. (Cancelled)

Page : 7 of 12

23. (Original) The electronic learning system of claim 21, wherein the first system

comprises a master repository that stores the course content.

24. (Original) The electronic learning system of claim 23, wherein the content player

accesses the content from the master repository.

25. (Original) The electronic learning system of claim 21, wherein the content player is

provided to a local computer, the local computer having access to a local repository of course

content.

26. (Original) The electronic learning system of claim 25, wherein the content player

accesses the content from the local repository.

27. (Original) The method of claim 21, wherein the third system encrypts the module

link before providing the module link.

28. (Original) The method of claim 21, wherein the third system encrypts the module

link with a public key that corresponds to a user of the software application.
